# FOSSIL
## GROUP

# INTERN, CLOUD TEAM (DEVOPS)

Interns play an integral role at Fossil Vietnam - you're the innovators-to-be, the big idea-creators, and the passionate newcomers who inspire us to make great products. We offer a diverse array of internship possibilities within various functions across the organization. Our programs are open to a limited group of students, as to provide personalized mentorship opportunities and an intimate, up-close perspective on how we work.
We're excited to teach you what we know and be inspired by your insights!

**WHAT YOU'LL BE RESPONSIBLE FOR:**
- Take part in provisioning infrastructure by coding, backend builds the dream, you build the road to get there.
- Develop scripts to automate deployment, scaling, costing, etc.
- Learn how to use several cloud providers such as Amazon Web Services and Google Cloud.
- Perform root cause analysis for production errors.
- Monitor production applications and make sure they run effective according to the cost.

**WHAT WE NEED:**
- Containerization - We are making our infrastructure immutable and we love containerizing whatever we can. Docker and Kubernetes are currently our main weapons to conquer the field.
- Source Version Control: more specifically, Git - We code our world, so we'd better version it. It's that simple why we need Git skills. If you're into Git, join us. By the way, if you're also into IaC (Infrastructure as Code) and have been familiar with names like Terraform.
- Documenting: you're proud of the work you've done? Good. Write it down, show it off to the world (or to your team only, if you're a bit shy).
- CI/CD: What would the DevOps world be like without Continuous Integration and Continuous Delivery/Deployment? And just so you know, we're leveraging Jenkins, but we'd love to hear from you any CI/CD tooling and story.
- Software Foundation: good about data areas such as network, operating system, etc.
- Attitude: willing to learn new things and own a quality mindset.
- Working time: able to work at least 3 days a week.

Please send your resume to **people@fossil.com** with the subject line as follow: **Fossil Talent Program 2020 - DevOps Intern**
