QA Tester (AI Model & Functional Focus)

Overview

We are seeking a QA Tester with a strong emphasis on data and functional testing to join our AI software development team. You'll play a crucial role in ensuring the quality and reliability of our AI-driven products, focusing on data integrity, functional correctness, and user acceptance.

Job Description

- Collect and maintain evaluation data based on the created test plans and test cases.
- Verify the integrity and accuracy of input and output data used by AI models within the testing applications and virtual environments.
- Develop and execute test cases to verify the functionality of AI software features and components.
- Work with machine learning engineers to make sure that functional & non-functional requirements are addressed.
- Document and report status on manual and automated test cases for functional and non-functional requirements.

Basic Requirements

- Bachelor's degree in Computer Science, Information Technology, or a related field.
- Ability to configure and utilize virtual environments for testing purposes.
- Ability to analyze and validate data for testing AI models.
- Experience designing and executing functional test cases.
- Comfortable working in Linux environments and basic understanding of network and hardware systems.
- Proficient in MS Office, Google Sheets, for data analysis and reporting.
- Ability to read and write in English to understand technical documentation and write reports.
- Being great at listening, participating, and expressing ideas.
- Have at least 1-2 years of experience in the AI field (In any position).

Benefits

- Competitive salary and benefits package.
- Opportunity to work on cutting-edge AI technology.
- Collaborative and innovative work environment.
- Mentorship and training for candidates with less experience in AI testing.
